

Nugget cube

Specific weight 1 g, approximately 8% water content

NU Series

The Nugget icemakers range is composed of two models, with different production capacity and they must be combined with a separate storage bin.

Nugget ice is generated through a vertical cylindrical evaporator, equipped with an internal turning auger that scours the ice on the evaporator surface and lifts it up to an ice extruder pressing the ice into a cylindric shape.

These machines can be matched with the broad choice of Icematic storage bins.
