

Rainbow Technology ®

In Icematic tradition of a constant qualitative and technological improvement of its products, we are pleased to present the new patent, which will allow a significant qualitative and functional step forward for our Modular ice makers.

We now provide “Rainbow protection” to our customers, a solution patented by Castelmac for its modular evaporators, which allows you to have the following advantages:

- Reduction over time of the deposit of limestone or organic compounds, compared to current evaporators, with consequent reduction in cleaning and maintenance times.
- Increased flow of ice on the evaporator fins during defrosting, with a consequent reduction in ice production times, and a consequent increase in ice production.
- Increased resistance to wear, due to the use of sanitizers and descalers, which, if used inappropriately, shorten the life of the evaporators, forcing costly replacements over time, and forced production stops.
- Elimination of the presence of residues in the water, due to wear and tear of the evaporators over time.
- In general, the life time of the evaporators increases, with a consequent reduction of the warranty costs.
